Air Quality Intel Permit Coordinator, George Davis  
Official Written Testimony  
DEQ Northwest Region  
2020 SW 4th Avenue, Suite 400  
Portland, OR 97201

October 2, 2013

Dear Mr. Davis,

My wife and I are very concerned about the amount and kind of toxic air emissions that Intel is proposing to be allowed to emit to their neighbors in the Portland Metropolitan area. Air emissions travel in many directions during different times of the year, but I have learned that the prevailing winds are toward Oregon City and East Portland. Is that true?

Is it also true that Intel has been emitting Fluorine related toxic chemicals in violation of its current permit? If so, why haven't you fined them for doing so, or required them to resubmit their application as a major source of pollutants. It seems that if I failed to pay my state income taxes, I would have to pay a fine or go to jail or.... And Intel's emitting of Fluorides and its combination with other chemicals has been shown to be injurious to people, especially the young, the not healthy individuals, and the aged.

My wife and I are in our 90s and we certainly do not want our health compromised by Intel's emissions. But just as important to us, is that we do not want our children and our grandchildren's health compromised by Intel's emissions; especially since if Intel was held to a very high standard of emission controls and was required to have continuous air monitors, they could reduce the toxic substances/chemicals they release into the air that we all breathe. Please make Intel not only comply with State and Federal Environmental Rules and Regulations, but go beyond those and protect the health and safety of its neighbors.

Sincerely,

Del and Stella Schrag
